

ROBERT MILLER, ND

499 N Maple St, Ephrata, PA 17522 | 717-572-4728 (Cell) | rmiller@tolhealth.com

EDUCATION

Trinity School of Natural Health, Warsaw Indiana
Doctor of Naturopathy

1998

Tree of Light Institute, Utah
Master of Holistic Healing

1994

International Academy of Medical Acupuncture, Phoenix AZ
Clinical Technician in Acupuncture

1996

WORK EXPERIENCE

Tree of Life Health, Ephrata, PA
Naturopath / Herbalist

1994 to Present

Has owned and operated Tree of Life Health for 21 years, where he consults with clients 60 hours per week, exclusively using genetic analysis to create custom nutritional programs to support digestion, methylation and detoxification.

Professional Health Products, Pittsburg, PA
Product Developer of Epigenetic Supplements

2011 to Present

Research and formulate the PHP Epigenetic line of supplements
To date 55 products have been brought to market for an equivalent number of SNPs, most of which were associated with the 5 cycles of the Methylation Pathway but more recently other pertinent SNPs are being added to the protocol on an ongoing basis. The results are very gratifying and consistent. Besides a busy speaking schedule, Dr. Miller is also much in demand for consultation with practitioners from a wide range of backgrounds, including: Medical Doctors, Osteopathic Doctors, Chiropractors, Doctors of Oriental Medicine and Naturopaths, helping them to properly implement MethylGenetic Nutrition into their busy practices. Dr. Miller's greatest gift seems to be the ability to take a very complex subject and organize it in a manner that makes it more easily understood and usable.

Methyl Genetic Nutrition Analysis
Founder and President

MethylGenetic Nutrition Analysis is a company that creates and markets cloud based software for health professionals to analyze the relationship between genetic variants, labs and symptoms to help the health professionals create nutritional protocols to compensate for genetic weakness.

NutriGenetic Research Institute
Founder and President

NutriGenetic Research Institute is performing ongoing research into the relationship between genetic SNPs, and health conditions or lab abnormalities.
